

## Important notice

### **JEWELRY**

The title of gold objects present in the catalogue, if not expressly indicated, is 750/1000 (18kt); The title for platinum is 950/1000

The dimensions of the jewels are not in scale 1:1

### **ESTIMATED WEIGHTS**

Weight of precious stones indicated in the catalogue is determined, if not expressly specified, through accurate measurements and mathematical formulas. The indications of the weights are therefore estimates and should be considered as such.

Weight expressed in grams, if not otherwise specified, is the gross weight of the object.

### **TREATMENT OF GEMSTONES**

Gemstones usually undergo treatments in order to improve their appearance. For example heat treatments that enhance colour and transparency of rubies and sapphires and oils applied to emeralds are considered common treatments and are accepted by jewelry dealers. There are other methods such as the use of pigments, irradiance or coating etc. that according to the type of gem will contribute to their permanent alteration. The improvement of the characteristics changes the market value, therefore the estimates of precious stones, where not otherwise specified by a certificate issued by a credited gemmological laboratory, are based on the hypothesis that precious stones may have been treated.

### **CONDITION REPORT**

For the more important jewelry present in the catalogue a condition report may be requested for single objects.

The jewelry expert of Il Ponte is available to answer all questions and doubts on lots for potential buyers.(18 kt)
